

Session Drums Download for Akai S-5000/6000 and Kontakt 2™

The Session Drums download features a complete stereo drum kit, including a choice of 2 kick drums and 2 snares. Because a modern drum recording typically uses a combination of close mics and an overhead pair of mics, we have included both sets of samples. In one program, you can control the mix of the overhead mics with the mod wheel!

The Kontakt 2 version has a special performance view, with a mixer allowing much more control over the sound. The kicks, snares, toms, and hi-hats can be mixed independently, each with separate controls for the close and overhead mics.

The download contains the following programs for Kontakt 2:

Session Drums

Close-mic and overhead mics with controls for each drum group (kicks, snares, rim, toms, hi-hats, crash cymbal, and ride cymbal). The crash and ride cymbals are overhead mics only. A button for bypassing the compression effect is also provided.

Session Drums Dry

Just the close-mic samples. Programs with and without compression included.

Session Drums Ovrhd Mics

Just the overhead mics. Programs with and without compression included.

Session Drums ModWhMix

The mod wheel mixes in the overhead mics. Programs with and without compression included.

Session Drums Live

A nice mix of the close-mic and overhead mic samples. Programs with and without compression included.

The download contains the following programs for Akai 5000/6000 samplers:

Session Drums Dry

Just the close-mic samples.

Session Drums Ovrhd Mics

Just the overhead mics.

Session Drums ModWhMix

The mod wheel mixes in the overhead mics.

Session Drums Live

A mix of the close-mic and overhead mics.

Session Drums Comprss

Just like 'Session Drums Live', except that the filter and envelopes are used to simulate outboard compression (somewhat successfully).

Installing for use with Kontakt 2:

Just drag the "Session Drums" folder onto an appropriate location on your sample drive (hopefully in the same area as the rest of your Kontakt library). Load as you would any other Kontakt instruments. We suggest removing the "Session Drms Akai S5k" folder from your sample drive to avoid confusion.

Using with Akai S5000-6000, Z-series samplers:

Drag the contents of the "Session Drms Samples" folder into the "Session Drms Akai S5k" folder, then burn a CD-rom to load into the sampler. Or, if you're using Aksys, just drag the contents of BOTH folders to the "Memory" icon in your Aksys browser

Compatibility:

This product is guaranteed to work on Akai S5000, 6000, Z-series samplers, as well as Kontakt 2. If you are using it on any other system, you're on your own!

YOU MUST HAVE THE MOST RECENT VERSION OF KONTAKT 2!
